#### All Energy brand components were developed with these sound principles in mind:

- **Flat On-Axis Frequency Response with Wide Bandwidth**  
Speakers should reproduce the entire audio range in a uniform manner. By ensuring that no one frequency dominates any other, Energy ensures that every note is the way it was intended to be – and the sound is as natural as possible.
- **Wide and Constant Dispersion**  
Sound at all frequencies radiating from the speakers should be in an even pattern, in all directions throughout the room.
- **Low Distortion and Resonance**  
No speaker system is totally distortion- or resonance-free, but Energy has achieved a significantly lower distortion level – a clearly audible improvement.
