

## BTS 2.1 Soundbar and Wired Subwoofer

### AN ABSOLUTE MUST FOR TODAY'S TV'S

Let's face it, today's TV's give you a breathtaking picture with uninspiring sound. Flat-panel TV's, no matter the size or cost, simply do not have the physical space to fit good speakers into. The result is sound that is weak and lacking overall clarity. The Energy brand has been at the forefront of providing popular options that bridge the gap between a high definition picture saddled with low definition sound. The BTS 2.1 soundbar system is an excellent option that provides a sound solution without breaking the budget.

### SIMPLE SETUP

Just place the soundbar in front of the TV (or wall-mount below it), put the subwoofer nearby, and use the included 3.5mm to dual RCA cable to connect to most TV's. Other connection methods include digital and analog options (cables not included) for total flexibility. Once the TV connection is made, quick-connect the subwoofer to the soundbar with the included cable, plug the soundbar in and turn it on for a complete sound upgrade!

### EASY OPERATION

You can program the BTS 2.1's Volume Up and Down and Mute functions into your own TV remote for easy, everyday use. You also have the option of controlling the same functions, plus bass output and more, with the included remote control.

### SWITCHABLE 3D SURROUND MODE

The BTS 2.1 system features 3D Surround Mode which adds spaciousness to the sound. This feature requires no distinct speaker placement, special room requirements or specific program material to work properly. This effect will work at multiple listening positions in your room.

### A SOUNDBAR AND WIRELESS MUSIC SYSTEM ALL IN ONE

With its *Bluetooth*® wireless technology feature, the BTS 2.1's excellent sound quality can also double as playback of your digitally stored music. Just turn on the *Bluetooth* feature of your smartphone, tablet, computer or other device, wirelessly connect to the BTS 2.1 and stream your music.
